NMS—A pill that reverses years of memory loss and triggers enhance brain function without side effects has been used safely in Italy for 31 years. It is now available in the United States without a prescription.

The remarkable pill contains a key ingredient, which was first developed by Italian Pharmaceutical scientists in 1987, not only reawaken mental function... but also... speed up thinking and reaction times in the brain.

It also works to restore healthy brain cells within the brain's neural network; this is what improves memory and learning functions.

Now an improved version of this pill is being offered in America under the brand name Prixelin.

With daily use, the powerful compound in Prixelin is able to get inside your brain, and give the brain an invigoration energy boost by producing key chemicals that 'wake up' healthy brain cells, which improve memory, enhance cognitive function and thinking power," explains Jeremy Williams, President of the parent company behind the Prixelin.

"This is what the clinical studies have shown and is why so many U.S. doctors are now recommending Prixelin to patients," he added.

Exciting Discovery of Memory Loss Reversed

Prixelin contains an amazing compound that has a known ability to improve memory and enhance brain function within days.

The compound is not a drug. It is the active ingredient in Prixelin.

Scientists believe that Prixelin's active ingredient works to block the enzyme responsible for breaking down a neurotransmitter.

The vital neurotransmitter, called acetylcholine (or AC), in the brain plays an important role for memory, thinking speed, reaction times and mental activity.

AC helps our brain cells communicate. Transferring information from one area to another. Without it our thoughts become "stuck" and we can't access information and memories.

Research shows that as we age, the healthy levels of AC in our brain begins to break down, which causes the brain cells gradually die.

The results can be delayed reactions, slower thinking, memory loss, and eventually a complete breakdown in brain function.

Well, that's where Prixelin comes in and why it seems to be so effective.

"I took Prixelin and felt fabulous. My speech has improved, my hands are shaking less. I even notice that my "senior moments" are becoming few and far between," said Loraine Sheldon from Austin, TX.

All this positive feedback makes it easy to understand why there is so much excitement and optimism surrounding this amazing new memory pill.

Clinical Results That Are Wowing The Medical Community

The clinical studies were conducted by top scientists

MEMORY LOSS REVERSED: Doctors are now recommending new Prixelin to seniors suffering from symptoms of memory loss and mental decline. Initial users in U.S. report improvements in memory, speech, thinking and learning functions without side effects.

here in the United States. The results were published in the prestigious medical journal *Neurology*.

The studies included both men and women who were suffering from age related memory loss. First, they had patients perform various memory tests. Then, they gave half the patients Prixelin's active ingredient. They gave the other half a placebo (dummy) pill. After 12 weeks they had the patients do the test again.

The results were astonishing.

The participants who took the pill as directed reversed their mental age by nearly 12 years according to researchers conducting the studies.

They also saw a huge improvement in their memory, learning and thinking ability. They could remember the names and faces of people they never met... find misplaced objects quickly... and recall telephone numbers easily.

Another study conducted in Italy produced similarity outstanding results, where user experienced a 44% improvement in mental function in just 90 days. Nothing like it has been seen before.

In fact, the FDA awarded Prixelin's active ingredient with a rare "Qualified Health Claim for both Cognitive Dysfunction and Dementia."

"All I did was take Prixelin daily like the instructions said and within days I noticed improvement. Everything seems so much clearer now. It's like a fog has been lifted from my mind," said Robert P., from Sedona, AZ.

The Way It Works Is Extraordinary

Prixelin is a one-a-day pill that's taken after breakfast. The pill is small. Easy to swallow. There are no harmful side effects. And it does not require a prescription.

Actually, the only 'side effect' is that the active ingredients in Prixelin boost your mood and can even help you sleep better. Researchers believe the Prixelin's active ingredient reduces cortisol, the brain's stress hormone. Resulting in less stress, which leads to better sleep and a more positive mood.

Scientists also believe the key ingredient in Prixelin works to block the enzyme destroys a vital neurotransmitter called acetylcholine, or AC.

How important is AC? VERY. If you're able to read this, you can thank your healthy levels of AC.

As we age, our AC levels go down naturally. But in people

suffering from age-related memory loss, something goes horribly wrong, which causes our brain cells gradually die. If brain cells fail, so does memory.

The results can be lapsed in concentration, forgetfulness, and mental decline; and that's where Prixelin comes in and why it seems to be so effective.

"I had severe memory problems," said 69 year old David S., of Henderson, NV. "But I can already concentrate and remember details better after only one month with Prixelin. This pill is easing my fear of dementia," he added.

What Doctors Are Saying

"Prixelin is the first real solution to come along for mental decline that is both side-effect free and supported by clinical trials. If you suffer from an age related memory loss, try this product immediately," said Dr. Peter Grossman, from Philadelphia, PA.

"In all my years as medical doctor, there is nothing else quite like Prixelin when it comes to supporting memory, concentration and healthy brain function. The product even relieves anxiety and stress without side effects," said Dr. Kimberly Langdon, from Columbus, OH.

"I recommend Prixelin to seniors who find it difficult to remember the events, people and names of their lives. The evidence shows it is especially effective for those who suffer from "brain fog" and "senior moments"," said Dr. Jenny Reategui, from Los Angeles, CA.

Special Opportunity To Get Prixelin

This is the official nationwide release of Prixelin in the United States. And so, the company is offering a special discount supply to any memory loss suffers who calls within the next 48-hours.

A Regional Order Hotline has been set up for local readers to call. This gives everyone an equal chance to try Prixelin.

Starting at 7:00 AM today, the order hotline will be open for 48-hours. All you have to do is call TOLL-FREE **1-800-489-2506** and provide the operator with the special discount approval code: **BB762**. The company will do the rest.

Important: Due to Prixelin's recent media exposure, phone lines are often busy. If you call and do not immediately get through, please be patient and call back. Those who miss the 48-hour deadline may have to pay full price for Prixelin.
