

# U.S. Surgeon General's report reveals the shocking truth about joint pain

The new 270-page report uncovers the truth about joint pain and paves the way for a unique solution that's giving hope to millions of Americans; with many already reporting significant improvements

**SEATTLE, WA** – New research suggests Americans may potentially be able to address the root cause of their joint pain.

According to research published in the US Surgeon General's report, certain enzymes are to blame. For years, researchers have known that enzymes in your body constantly break down and replace joint tissue.

However, the research from the 270-page report suggests that certain enzymes strip away the cartilage from your joints faster than they can rebuild it.

Now, a company in Seattle, Washington has taken this research to the next level, developing a joint supplement that targets these specific enzymes. Sold under the name VeraFlex, it works in a unique way that's leaving doctors impressed.

"When these enzymes eat away cartilage, your joints have no protection or lubrication," says Dr. Liza Leal, a world-renowned expert in pain management and company spokesperson. "This results in excruciating pain shooting through your knees, hips, back, and hands, every time you move."

However, with the release of VeraFlex, there is now hope for millions of Americans.

The active ingredients in this all-natural solution have been shown to regulate the enzymes from breaking down joint cartilage.

"I'm happier now with this," says 65-year old, Rossana Murray, user turned spokesperson. "I'd recommend it to my friends, my coworkers, and even other doctors. I want them to suggest this to their patients too."

## Natural Ingredient Helps Slow Down The Loss Of Collagen

Groundbreaking research revealed how certain enzymes in your body are actually stripping away collagen and other vital nutrients required to support healthy joints.

Thankfully, the active ingredients in VeraFlex can reverse this process.

**For the first time ever,** research has shown that a natural ingredient is able to help slow down the loss of collagen.

"Up until recently, the only way to soothe the painful joints was through prescription drugs," says Dr. Leal. "But the problem is, NSAIDs including Ibuprofen, celecoxib, and naproxen only block one of the enzymes that cause the problem. And they're laden with dangerous side-effects."

However, thanks to the release of VeraFlex, it is now possible to relieve joint pain, reduce stiffness, and support the healthy function of joints—without taking dangerous prescription pills.

## The Ingredient That Beats Big-Pharma In Trials

In a head-to-head study published by JSS Medical Research Inc., the active ingredient in VeraFlex outperformed a popular NSAID in several categories.

**U.S. General Surgeon's report reveals an insight to inflammation that may change the way we tackle joint pain**

Researchers took a group of 40-75-year-olds who experienced stiff, sore hips, knees, and split them into two groups. One group was given the active ingredient in VeraFlex, while the other was given a popular NSAID.

Within 30-days, the active ingredient group blew the NSAID group out of the water. And by the 60-day mark, they reported statistically significant less joint pain and a greater range of motion compared to the NSAID group.

And by the 90-day mark, researchers were shocked to discover that the active ingredient group reported a 200% improvement in reducing joint pain and stiffness. Best of all, there were no observed side-effects in 30, 60, and even 90 days.

In another head-to-head study, researchers at Florida State University split participants into two groups. Half of the participants received 500mg per day of the active ingredient while the other half received 440mg of a popular NSAID.

Within 7 days, the participants who took the natural active ingredient found in VeraFlex saw a fast relief joint stiffness in just 3 days, reduction of joint discomfort in 5 days and improvement of joint function in 7 days with statistically significant enhancement of range of motion that outperformed the control NSAID..

## Simple Tasks Can Be Easy Again

Research has shown that certain enzymes in your body continuously break down old joint tissue and replace it with new joint tissue. They strip away old collagen cells and replace them with new ones.

However, due to oxidative stress induced by wear and tear, this catabolic process gets flared up. When this happens, the enzymes go through something known as enzymatic disorientation. A phenomenon where your enzymes start to rip collagen from your joints faster than they replace it.

As a result, things that used to be simple — such as opening jars, buckling your seatbelt, or climbing stairs — require assistance from others.

Researchers believe that in order to support healthy joints, you have to stop the enzymatic disorientation process and start growing collagen instead. Unfortunately, up until recently the only way you could get temporary relief was through dangerous NSAIDs.

However, with the help of VeraFlex you can now block the flare up of these enzymes from secretly eating away at the collagen

surrounding your joints. Furthermore, VeraFlex is even able to promote the production of new collagen by dampening down the catabolic force destroying your joints.

The active ingredient that makes VeraFlex so powerful is called UP446. It's a proprietary blend of two natural ingredients—and its patent protected by number US Patent #7,108,868.

## Helps Boosts Cartilage

"Collagen is a protein that helps maintain the structure, elasticity, and durability of connective tissue," explains Dr. Leal. "Cartilage is made out of collagen."

In order to produce and store collagen, you need adequate Vitamin C to control the oxidative stress initiated by wear and tear. The other active ingredient in VeraFlex has been shown to help your body absorb Vitamin C much faster than anything else on the market.

Users of VeraFlex often report a significant improvement in pain, stiffness, and joint range of motion and normal function, often in a few days.

Researchers believe that once you reverse enzymatic disorientation, these enzymes will stop catabolic stripping collagen and cartilage will shift to anabolic rebuild process instead. And once you boost collagen production, you'll have everything you need to sustain healthy, youthful joints.

## How To Get Your Risk Free Supply

This is a RISK-FREE promotion for VeraFlex. If you are not feeling great, moving around easier, and improving your range of motion, you're automatically backed by our 100% money back guarantee.

For a limited time the company is giving our readers FREE shipping and up to a FREE 3 month supply of VeraFlex with qualifying orders. If you need financial assistance the company may be able to help.

This special give-away starts at 5AM and will last until product runs out, whit past promotions, that has happened early I the day. Our phone lines are open 24hrs a day. All you have to do is call TOLL-FREE 1-800-236-6396 now and speak with a friendly US based VeraFlex representative. The special offers will be automatically applied.

Important: Due to VeraFlex's growing media exposure, if you're interested in becoming another satisfied customer and taking advantage of this special offer, the company advises to call now while supplies last.
